# **JET GROUT KIT FOR PILING RIG**

Z Makina has developed a jet grouting system with the single stroke columns to depths of 36 m capacity. It was designed which can be mounted on the piling rig used for jet grouting come in a range of different sizes; large ones, making it a perfect technique for improving the foundation of an existing structure.

During the jetting process it is imperative that the desired jetting parameters are maintained. Typically, the DATA Logger system monitors the rotation rate and withdrawal rate, as well as the grout, air, and grout flow. This information is displayed in real time for the operator, and raw data's are transmitted to the DATA Logger database where it is post-processed, stored and reviewed by the project team.
